Mr. Sal Costanzo
Enviroshield Technologies
P.O. Box 1225
Mansfield, MA 02048

Dear Sal:

I wish to thank you for giving me the opportunity to see your product in use at the Bristol County Jail and other locations in the area. Your product appears to have remarkable properties I have not seen in other products. As a breathable, flexible, water-based epoxy, it has resolved many of the short coming of the normal solvent based epoxies.

Its ability to control water vapor transmission and bind with the water in whatever substrate it's applied to, allows it to adhere to surfaces where other coating would peel off from the vapor pressure. The anti-microbial additive in the product appears to inhibit the growth of mold even when the humidity is high enough to permit growth on other surfaces.

As a nationally recognized expert in jail conditions and sanitation; I am pleased when jail such as Bristol Co. uses new technology to prevent a problem developing in spite of having limited resources. To me, this indicates a well run department that looks for a long term, cost effective resolution, not a quick fix.

As with any product, the Enviroshield's success depends upon selection of the proper application for the product, preparation of the surface and properly trained workers applying the product.

Sincerely,

Angus S. Reed
